ARCHITECTURAL LIGHTING DEVICES WITH PHOTSENSITIVE LENS

ABSTRACT OF DISCLOSURE

5

An interior or exterior design lighting assembly with a photosensitive sheet member in spaced relation to said assembly capable of aesthetically concealing its inner componentry by having said photosensitive sheet member adapting a darkened appearance when said assembly is in its de-energized state. When the light assembly is energized said photosensitive sheet member will render its darkened state to adapt a transparent state allowing for full light transmission to occur.
